STUDIES

Kandó Kálmán College of Electrical Industry
1997 - 2001
Rippl-Rónay Secondary School of Transport Engineering
1990 – 1995

EXPERIENCES

Evosoft Hungary Ltd. – software engineer C#
2018–2024
As a member of the Scrum team, I develop features and write tests for our supported product. I check the daily results of the tests, if it necessary I adapt tests or look for the cause of errors. Knowing your domain is essential for my job.
In development, we followed our own coding guideline. we have SOLID principles in mind.
We used TFS Source Controller, GIT for smaller jobs.
For integration tests, NUnit and TASuite were used.
In addition to our daily work, we got acquainted with Github Copilot

Business Integrated Solutions – software engineer C#
2015-2017
As a member of the maintenance team, the bank clerk maintains web software and corrects reported errors. My responsibilities were troubleshooting, consulting, and, if necessary, developing new functions.

Software House Ltd. – software engineer C#
2013-2015
The company produces software for logistics. Here I mainly participate in the creation of winform and winservice based software. The purpose of the software is data recording and decision preparation. In addition to development, I also participate in operation and support work.
Old code was written in Delphy and was often ported to C#.
We used Firebird database as database in addition to MSSQL. As ORM, we used Telerik's product alongside EF. We used the SVN source controller.

Center European On Demand – software engineer C#
2011-2012
The company is one of the market leaders in cloud services. I mainly created winservices, asp.net webservices, and dynamic websites. The purpose of the software I created was mostly to manage mail servers with IMAP, POP3, SMTP protocols. I made additions to existing ticketing systems, database backups (SOAP, REST) via API. I designed and prepared the software, I participated in the operation

Quadro Byte Ltd – software engineer C#

2010-2011
We have created registry software. We maintained existing databases.
I designed and created the software, I participated in the operation.
The technology was ASP.NET Form. We used an MSSQL database.

Szidarovszky Ltd – software engineer C#
2008-2009
This company is engaged in the development of management software. The software I created was winservices, asp.net sites. My task was to keep contact, prepare the system plan, implement the software.
The technology was ASP.NET Form. We used an MSSQL database.

Saturnus Informatikai Ltd - software engineer C#
2007-2008
The profile of the company is the development, operation and support of software implementing GPS tracking. My task was to develop client programs for PDA and PNA. Their goal was to implement group tracking.
The platform was Windows C, I used C# for coding

Videoton Mérnöki Fejlesztő Ltd- software engineer C, C++
2001-2007
The main activity of the company is the development of digital radio receivers in PC card design. I developed driver and management software for these customers. C-C++. My software was responsible for managing the hardware, controlling the system, providing an interface, analyzing the received signals. My task was to design, implement and document the software based on specifications
